

## Access® Computer Lenses: Vision for the Workplace

### If you work in an office, or use your computer more than two hours per day:

- Do your eyes get tired or dry?
- Do you suffer from back, neck or headaches?
- Is it hard to keep the computer screen in focus?
- Do you find yourself leaning forward or backward to see the computer screen?

If you answered "yes" to any of these questions, you are experiencing *Computer Vision Syndrome*. Access® Computer Lenses help you see better and work more comfortably.

SOLA lenses are made by Carl Zeiss Vision, a leading worldwide manufacturer of eyeglass lenses known for quality, innovation and commitment to vision needs.

## The Problem: Computer Vision Syndrome

If you're like many people, office and computer work are the biggest part of your day – and the most visually demanding. Increasingly, computer users report dry, tired eyes, backaches, headaches and neck aches. This complex of symptoms is called *Computer Vision Syndrome*.\*

Computer Vision Syndrome is often the result of using eyeglasses that are not ideal for computer and office work.

- *Bifocal lenses* have no mid-range vision for viewing the computer screen.
- Some *progressive lenses* may not have large enough mid-range viewing areas for sustained, comfortable computer use.

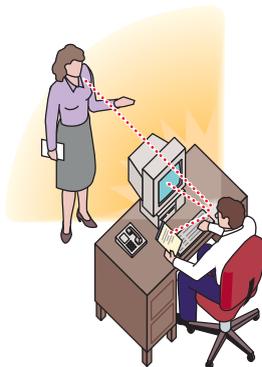

As a result, your eyes have to work harder, and you may have to sit in an uncomfortable position to view the computer screen.

\*A complex of eye and vision problems associated with extended computer use.

## The Solution: Access® Computer Lenses

Access® Computer Lenses by SOLA are designed for optimum visual performance in computer and office work, so you can work comfortably without the symptoms of Computer Vision Syndrome.

**Access® Computer Lenses** provide a clear view of the computer work area and beyond – up to 7 feet.\*

- The top half of the lens allows you to view your computer screen clearly with proper posture.
- The bottom half of the lens lets you view your keyboard, desk and reading material.
- The top and bottom portions are separated by a smooth, natural transition without the sharp line found in bifocals.

\* Note: Access® Computer Lenses do not offer a clear view of objects beyond seven feet away. They should never be used while driving or for other activities that require clear distance vision.

## See Clearly, Work Comfortably

Every type of work requires the proper tools. For computer and office work, Access® Computer Lenses can provide you with the superior vision that lets you do your best work, and feel good doing it.

Ask your eye care professional if Access® Computer Lenses are right for you.
